1 Introduction

This guide describes how to make use of the OpenScape Customer Satisfaction Survey (CSAT Survey) feature when using the OpenScape Contact Center communication system.

CSAT Survey allows transferring a voice media contact to a CSAT Survey destination number, after being handled by an agent.

To use the CSAT Survey functionality, after the conversation with the agent, the caller must stay on the call to receive one or more survey questions. The call must be disconnected by the agent.

Only the calls where the contact data has a CSAT Survey destination number associated will be followed by a CSAT Survey.

By default, after the call is enqueued and connected to an agent, the caller is invited to participate in the CSAT Survey. If the called agrees to participate, the contact data is associated with the call.

The caller can answer survey questions, by pressing keys on the phone or responding verbally.

The survey results can be accessed through reports.

2 Functional Description

CSAT Survey can be integrated with following solutions:

- OpenScape Contact Center Call Director
- OpenScape Contact Media Service Voice Portal
- Third Party IVR

The callers can choose at the beginning of the call whether they want to participate in the CSAT Survey. Depending on the answer, the contact data will be associated with the call or not. In a **Routing Strategy Workflow**, this can be achieved by configuring a **Menu Prompt** node to ask for participation, followed by a **Contact Data Update** node to set the contact data in the affirmative case. These nodes can be positioned in the Routing Strategy Workflow at any appropriate place before the enqueue of the call.

Depending on the destination number of the contact data key, the caller can be transferred to one of multiple configured CSAT Surveys. At the end of the call, when the agent disconnects via the Agent Portal Web application, the system intercepts the disconnection and transfers the call to the CSAT Survey destination number.

NOTICE:

If the caller disconnects from the call before the agent, the CSAT Survey will not be executed.

2.1 Functions

The following functions are available with CSAT Survey:

- **CSAT Survey Management:** create, change, delete, activate and deactivate automatic post-call surveys.
- **CSAT Survey Report:** define and view survey reports per agent, time or queue.

Advantages of using CSAT Survey

- CSAT Survey can be integrated with existing Routing Strategy Workflows.
- The CSAT Survey ports are only used during the execution of the survey.

Limitations of using CSAT Survey

- CSTA Survey requires the OpenScape Contact Center solution.
- If the agent answers and/or disconnects the call via the physical phone or via a SIP soft phone, OpenScape Contact Center is not able to transfer the call to a CSAT destination number. In this case, the CSAT Survey will not be executed. The agent must answer and disconnect the call using the Agent Portal Web application.

3 System Requirements

This chapter presents the system requirements for the CSAT Survey feature.

OpenScape Contact Media Service

The system requirements for OpenScape Contact Media Service are displayed in the following table:

| Requirement | Description |
|------------------|--|
| Processor | 1x Intel Xeon Gold 5118 2.3GHz |
| Memory | 8GB-for every group of 50 TTS ports 24GB -for every group of 50 ASR ports |
| Hard Drive | HD1: 160 GB, 7200 RPM, SATA HD2: 100 GB, 7200 RPM, SATA |
| Display settings | 1024 x 768 pixels with 16-bit color |
| Other | 1 Gbps Ethernet network interface card |

Table 1: System requirements for Contact Media Service

NOTICE: The CSAT Survey components are installed as part of CMS and requires a second hard disk to store the PostgreSQL database, recordings of natural voice for open questions and statistical data. The minimum requirement for basic functionality is 100GB, but it needs to be adapted according to the customer needs.

OpenScape Contact Center Server

For the OpenScape Contact Server system requirements, please refer to the *OpenScape Contact Center Enterprise V12, Installation Guide*.

4 Operation Modes

The following operating modes are available with the CSAT Survey feature:

- Without integration with OpenScape Contact Center Call Director, Contact Media Service Voice Portal or Third Party IVR
- With OpenScape Contact Center Call Director integration
- With OpenScape Contact Media Service Voice Portal or Third Party IVR integration

4.1 Operating mode without integration

In this case, the call is routed through the OpenScape Contact Center Routing Strategy and Queue Processing flows without any interaction with OpenScape Contact Center Call Director, OpenScape Contact Media Service Voice Portal or Third Party IVR. Using this operating mode, the caller does not have the possibility to participate in the CSAT Survey by default.

To use survey functionality with such configuration, the decision to transfer the call to CSAT Survey can be made in the Routing Strategy flow, by defining a **Source/DestinationDecision** node based on the destination number. The corresponding voice contacts are updated with the **Contact Data** key/value pair and are transferred to the CSAT Survey after the agent disconnects the call via Agent Portal Web. If the caller decides not to participate in the CSAT Survey, then the call can be disconnected by caller.

The following diagram displays the CSAT Survey operating mode without integration with OpenScape Contact Center Call Director, OpenScape Contact Media Service Voice Portal or Third Party IVR:

Operation Modes

Operating mode with OSCC Call Director integration

Figure 1: Operating mode without integration

The call flow for this scenario is the following:

- 1) The caller initiates a call to the OpenScope Contact Center pilot number.
- 2) The call is notified to OpenScope Contact Center system.
- 3) According to the Routing Strategy, the Contact Data is created/updated with the CSAT Survey destination number and the call is routed to an agent.
- 4) The agent disconnects the call via Agent Portal Web.
- 5) The OpenScope Contact Center system is notified about the call disconnection and checks if there is existing Contact Data for CSAT Survey.
- 6) If positive, the caller is transferred to the CSAT Survey destination number.
- 7) The CSAT Survey is executed for the caller.

4.2 Operating mode with OSCC Call Director integration

In this case, the call is routed through the Routing Strategy flow and a message is played in the **Menu Prompt** node. The purpose of the message is to ask the caller whether to participate in a CSAT Survey. If the caller agrees to participate in the survey, the key/value pair is created in the **Contact Data Update** node. Finally, the call is queued for queue processing and assignment to an agent.

The following diagram displays the CSAT Survey operating mode with OpenScope Contact Center Call Director integration:

Figure 2: Operating mode with OSCC Call Director integration

The call flow for this scenario is the following:

- 1) The caller initiates a call to the OpenScape Contact Center pilot number.
- 2) The call is notified to OpenScape Contact Center system.
- 3) The Routing Strategy includes actions for interacting with OpenScape Contact Center Call Director.
- 4) The caller is asked whether to participate in the CSAT Survey at the end of the call. If the caller agrees to participate to the survey, a Contact Data key/value pair is created with the CSAT Survey destination number.
- 5) The call is routed to an agent.
- 6) The agent disconnects the call via the Agent Portal Web.
- 7) The OpenScape Contact Center system is notified about the call disconnection and checks if there is existing Contact Data for CSAT Survey.
- 8) If positive, the caller is transferred to the CSAT Survey destination number.
- 9) The CSAT Survey is executed for the caller.

4.3 Operating mode with CMS Voice Portal or Third Party IVR integration

In this case, the call is initially received by the Contact Media Service Voice Portal / Third Party IVR where the IVR flow offers to the caller the possibility to participate in a CSAT Survey. If the caller agrees to participate, then a Contact Data key/value pair is associated with the call before the call is transferred to

Operation Modes

OpenScope Contact Center IVR Transit number. Finally, the call is queued for queue processing and assignment to an agent.

The following diagram displays the CSAT Survey operating mode with CMS Voice Portal / Third Party IVR:

Figure 3: Operating mode with CMS Voice Portal or Third Party IVR integration

The call flow for this scenario is the following:

- 1) The caller initiates a call to the CMS Voice Portal/Third Party IVR pilot number.
- 2) The call is notified to CMS Voice Portal/Third Party IVR.
- 3) While in the IVR flow, the caller is asked whether to participate in the CSAT Survey at the end of the call. If positive, a Contact Data key/value pair is created with the CSAT Survey destination number.
- 4) The call is transferred to OpenScope Contact Center via the IVR transit number together with the updated/created Contact Data.
- 5) The call is queued and routed to an agent.
- 6) The agent disconnects the call via the Agent Portal Web.
- 7) The OpenScope Contact Center system is notified about the call disconnection and checks if there is existing Contact Data for CSAT Survey.
- 8) If positive, the caller is transferred to the CSAT Survey destination number.
- 9) The CSAT Survey is executed for the caller.

5 Components

The OpenScape Customer Satisfaction Survey feature uses the following components:

- **OpenScape Contact Media Service**

The component is responsible for:

- Applying the license for the CSAT Survey feature, and for the TTS and ASR ports.
- Enabling the CSAT feature.
- Uploading the desired Voice Portal language packages (TTS and ASR) to be used by the feature.
- Configuring the CSAT Survey Pilot Numbers.
- Configuring the REST SDK.
- Configuring the CSAT Survey PostgreSQL database
- Configuring the extensions for OSCC Call Director.
- Configuring the Voice Portal.

- **OpenScape Contact Center**

The component is responsible for:

- Configuring a Menu Prompt node, for asking the caller to participate in a CSAT Survey.
- Configuring a Contact Data Update node with the CSAT Survey destination number.
- Configuring the REST SDK.
- Transferring the call to the CSAT Survey destination number after being handled by an agent.
- Configuring the Call Director integration: connection, extensions and workflows.
- Configuring the Voice Portal/Third Party IVR integration: IVR transit number.

- **Communication Platform (OpenScape Voice and OpenScape 4000)**

The component is responsible for:

- Establishing the inbound calls
- Configuring the CSAT Pilot Numbers as SIP Trunk or Subscriber numbers.

- **CSAT Survey (OpenScape Contact Media Service)**

The component is responsible for:

- Creating the CSAT Survey User Roles.
- Creating and executing the CSAT Surveys.
- Uploading the wave files to be used in the CSAT Surveys.
- Uploading the Properties Files for the languages (ASR).

- **Third Party IVR**

The component is responsible for:

- Receiving the inbound calls and offer the possibility to the caller to participate in the CSAT Survey and create Contact Data with the CSAT Survey destination number.
- Transferring the call to OpenScape Contact Center for being routed to an agent.

6 Components Configuration

To deploy a complete environment for the CSAT Survey feature, it is necessary to configure certain components. The complete list of components that can be configured for this feature, is available in the [Components](#) on page 11 chapter.

Not all components need to be configured. The configuration depends on the operating mode and the functionality used.

6.1 OpenScape Contact Media Service

6.1.1 Licensing

To use the CSAT Survey feature with OpenScape Contact Media Service, the following licenses are needed:

- **CSAT License Ports**

The number of ports depends on the maximum number of concurrent inbound calls, for which the CSAT Survey is to be executed.

- **Text to Speech License Ports (TTS)**

This license is only mandatory if the CSAT Survey has questions in Text to Speech format (TTS). This license allows the caller to hear the CSAT Survey questions, read out by the system.

- **Automatic Speech Recognition License Ports (ASR)**

This license is only mandatory if the CSAT Survey has questions formulated to which the caller answers in natural language. This way, the answers are recognized by the system.

NOTICE:

Once the TTS and ASR ports are shared with Voice Portal, the amount of them can be equal or greater than the amount of CSAT ports.

The amount of TTS ports cannot be lower than the amount of CSAT ports.

The ASR ports are not mandatory but, if voice recognition is used in the survey, the amount of ASR ports cannot be lower than the amount of CSAT ports.

The licensing information is displayed in the **License Configuration** section of Contact Media Service.

Figure 4: Licensing information for Contact Media Service

6.1.2 Enabling the CSAT feature

Before proceeding with any configurations, the CSAT feature must be enabled and the service must be restarted.

Follow the steps below to enable the CSAT feature:

- 1) Open Contact Media Service and navigate to the **IVR Configuration** tab.
- 2) Under the **General** area, click the check box next to **CSAT Enabled** to enable the feature.
- 3) Click **Save**.
- 4) For the changes to be applied, you must restart the service. Click **Restart Service** in the upper part of the screen, next to **User**.

Figure 5: Enabling the CSAT feature in Contact Media Service

6.1.3 Uploading Voice Portal language packages

For the languages used by the CSAT Survey feature, you must upload the corresponding TTS and ASR packages.

Follow the steps below to upload language packages:

- 1) Open Contact Media Service and navigate to the **IVR Configuration** tab.
- 2) Open the **Packages Upload** tab.
- 3) Under the **Language Packages (ASR)** section, browse for and select the ASR package/s to be uploaded.
- 4) Under the **Voice Packages (TTS)** section, browse for and select the TTS package/s to be uploaded.

Figure 6:

6.1.4 Configuring the CSAT Extension

To use the CSAT Survey functionality, it is mandatory to configure the CSAT Extension resource. The role of this resource is to transfer the caller who accepted to participate in the CSAT Survey to the CSAT Extension number and start the survey.

The CSAT Extension resource can be a Sip Endpoint (Trunk) number, a subscriber number on OpenScape Voice or a Sip Trunk number on OpenScape 4000.

Follow the steps below to configure the CSAT Extension:

- 1) Open Contact Media Service and navigate to the **IVR Configuration** tab.
- 2) Open the **CSAT Extensions** tab.
- 3) Click **+ Add extensions** to add a new CSAT Extension number or edit an existing extension number according to your need.
- 4) Click the check box next to **Use as Trunk** if you wish to enable this option.
- 5) Click **Save**.

Figure 7: Configuring the CSAT Extension on Contact Media Service

6.1.5 Configuring the CSAT database

All configurations for the CSAT feature are stored in a PostgreSQL database, on the CMS server. It is possible to use the default settings for the CSAT database and change them only if needed:

The CSAT Database settings are available in the **CSAT Database** tab of Contact Media Service.

The **CSAT Database** tab includes the following sections:

- **Database Connection Credentials**

This section includes the credentials for local access to the database:

- Username (default: survey)
- Password

- **Database Remote Access Configuration**

This area is used to enable or disable remote access to the database and includes:

- The option to enable or disable remote access to the database, by clicking the check box next to **Enable Remote Access**.

By default, this option is disabled.

NOTICE: Once the Remote Access is enabled, it cannot be disabled.

- The **Username** credential

This field cannot be edited and, by default, it is filled with the value "survey reporter".

- The **Password** credential

This is an editable field.

- **Database Data Retention Configuration**

This field can be used to set the data retention period for keeping the survey data in the database.

The default data retention period is 3 months, but it can be changed to a value in the range of 1 to 60 months.

Figure 8: Configuring the CSAT Database in Contact Media Service

NOTICE:

The data retention period is not applied to the CSAT Surveys that are in the **Production** state. It affects only archived CSAT

Surveys and the CSAT Surveys, that are not yet in production (Draft state).

When applied, it deletes the entire Survey, including questions and statistics.

6.1.6 Configuring REST SDK

REST SDK must be configured to allow storing the Agent IDs from OpenScope Contact Center in the CSAT Survey Database and using them in the reports.

Follow the steps below to configure the REST SDK settings:

- 1) Open Contact Media Service and navigate to the **CTI Configuration** tab.
- 2) Click the check box next to **RestSDK Enabled** to enable this option.
- 3) The following figure displays an example of configuring the REST SDK parameters. Configure the parameters accordingly.

Figure 9: Configuring REST SDK in Contact Media Service

6.1.7 Configuring OSCC Call Director

If the CSAT Survey feature is integrated with OSCC Call Director, then the OpenScope Contact Media Service extensions are needed to be configured for playing the Call Director messages.

For more information about the configuration steps, please refer to the OpenScape Contact Media Service Installation Guide.

6.1.8 Configuring CMS Voice Portal

In case of integration with **CMS Voice Portal**, the IVR flow must be configured. The purpose of such configuration is to offer to the caller the possibility to participate in the CSAT Survey and to provide the proper contact data information to transfer the call to the Survey.

The Contact Data must be created or update in the IVR flow and must have the following content:

| Key | Value |
|--------------------|----------------------------|
| ___HPPC_OSCMS_CSAT | <CSAT Survey Pilot Number> |

NOTICE: The contact data key must have the following name: **___HPPC_OSCMS_CSAT** (starting with three underscores).

The call must be transferred to the OpenScape Contact Center IVR transit number. An example of such configuration on the Application builder is displayed in the figure below:

Figure 10: Configuration of IVR flow

6.2 OpenScape Contact Center

OpenScape Contact Center must be configured to update the contact data for each routed call that must be transferred to the CSAT Survey after being handled by an agent.

6.2.1 Configuring the Manager application

In the OpenScape Contact Center Manager application, the **Contact Data Update** node must be used in a Routing Strategy Workflow.

The contact data key must have the following name: **___HPPC_OSCMS_CSAT** (starting with three underscores).

The value of the contact data key is the CSAT Survey Pilot Number, which is the call transfer destination after being handled by the agent.

The contact data key must have the following format:

| Key | Value |
|--------------------|----------------------------|
| ___HPPC_OSCMS_CSAT | <CSAT Survey Pilot Number> |

Figure 11: CSAT Survey Routing Strategy in Manager application

The **Contact Data Update** node can be used at the appropriate place in one or more Routing Strategy Workflows, before the **Enqueue** node. By configuring different CSAT Survey Pilot Numbers, it is possible to use multiple **Contact Data Update** nodes to transfer a call after termination to one of the CSAT Surveys configured.

If the CSAT Survey feature is integrated with OpenScope Contact Center Call Director, then it is possible to play a message in a **Menu Prompt** node to ask the caller whether to participate in a CSAT Survey. Subsequently, depending on the key pressed by the caller, the **Contact Data Update** node is used to create the required contact data if the caller accept to participate in the survey.

If the CSAT Survey feature is integrated with CMS Voice Portal or Third Party IVR, then in the IVR flow, the caller is asked to participate in the CSAT Survey, the contact data is created and the queue for the call determined. In the OSCC Manager application, IVR transit Numbers must be configured to transfer the calls to OpenScope Contact Center for queuing and assignment to an agent.

For more information about the configuration steps, please refer to the OpenScope Contact Center Manager Administration Guide.

6.2.2 Configuring the Web Manager application

For the configuration of the Web Manager application, the Client Name and Token must be provided in the REST SDK section of OpenScape Contact Media Service.

Follow the steps below to configure the REST SDK settings:

- 1) Open the Web Manager application and navigate to the **REST SDK** tab.
- 2) In the **Clients** section, click the **+ Add REST SDK Client** button.
- 3) Add **Client Name** and **Client Token** in the corresponding fields

Figure 12: Configuring the Client Name and Token in REST SDK

NOTICE: If CSAT Survey is used in an OpenScape Contact Center Multitenancy environment and surveys need to run in multiple business units, then multiple CMS servers are needed. The reason for this is that the REST SDK configuration on the CMS server(see the [Configuring REST SDK](#) on page 17 chapter) is only possible for a single business unit.

For more information about the configuration, please refer to the OpenScape Contact Center Web Manager Administration Guide.

6.3 Communication Platforms

The CSAT Survey feature can be used with the following communication platforms:

- OpenScape Voice
- OpenScape 4000

6.3.1 OpenScape Voice

When using the OpenScape Voice platform, the CSAT Pilot Number can be a SIP Endpoint (trunk) or a subscriber number.

If the CSAT Survey feature uses a SIP Endpoint (trunk) number, it must be **Registered, Trusted** and must have the flag **Do not Audit Endpoint** enabled.

No special subscriber number configuration is needed if the CSAT Survey feature uses a Subscriber number to receive CSAT Survey inbound calls.

6.3.2 OpenScape 4000

When using the OpenScape 4000 platform, the CSAT Pilot Number must be a SIP Trunk.

If the CSAT Survey uses a SIP Trunk, the **Profile** used must be **Xpressions** and the **Gateway Basic System Settings** must have the flag **Allow SIP Register for Trunking** disabled.

A Subscriber number cannot be used as CSAT Extension as it does not accept parallel calls.

6.4 Third Party IVR

This solution uses one of the following interfaces:

- OpenScape Contact Center IVR application programming interface (API)
- OpenScape Contact Center VoiceXML interface

In case of integration with **Third Party IVR**, the IVR flow must be configured to allow the caller to participate in CSAT Survey and to use the proper contact data information for transferring the call to the Survey at the end of the contact.

The Contact Data must be created or updated in the IVR flow and must include the following content:

| Key | Value |
|--------------------|----------------------------|
| ___HPPC_OSCMS_CSAT | <CSAT Survey Pilot Number> |

NOTICE: The contact data key must have the following name: **___HPPC_OSCMS_CSAT** (starting with three underscores).

For more information about Third Party IVR solutions, please refer to your service representative.

7 CSAT Survey Management and Administration

The CSAT Survey feature is managed and administrated using a web application, which is accessed via the OpenScape Contact Media Server, through port 9876, as displayed in the example below:

`https://<OSCC_ContactMediaServer_hostname_or_ip>:9876`

The Customer Satisfaction Survey web application can be used for:

- **CSAT Survey Access Management**
- **CSAT Survey Administration**

The authentication page allows the user to login and select the language in which the application is displayed.

Figure 13: CSAT Authentication page

The default credentials for authentication are the following:

- **User:** master
- **Password:** password

NOTICE: After the first login with the default user credentials, the password must be changed. This "master" user is the only user available for the first login.

7.1 CSAT Survey Access Management

Using the CSAT Survey Access Management page it is possible to manage survey users, survey groups, properties files for ASR and system parameters.

Logging in to the CSAT Survey Access Management page is possible only for users with the **CSAT Survey Master** or **CSAT Survey Group Manager** roles.

The administration permissions of each user depend on the role assigned. The users with the **CSAT Survey Master** role have access to all configurations, while the users with the **CSAT Survey Group Manager** role have access only to the Survey Users and Survey Groups.

The following user roles are available in the web application:

- **CSAT Survey Master** role

Users with this role are able to:

- Create, remove, update and view users.
- Manage passwords.
- Create, disable, update or display groups.
- Associate users and groups.
- Upload, download and delete Properties Files (ASR).
- Enable or disable the possibility to store individual agent statistics.

NOTICE:

No password policies are implemented.

The groups are not removed, but disabled.

- **CSAT Survey Group Manager**

Users with this role are able to:

- Create, remove, update, view, archive users and associate them in groups.
- Manage the user passwords of the groups for which he/she is responsible for.
- View groups.
- Enable or disable groups.

- **CSAT Survey Administrator**

Users with this role are able to:

- Create, remove, update and view surveys.
- Search, play and download recordings.
- Generate and view reports.

NOTICE: The CSAT Survey Administrator can assign surveys only to the groups for which he/she is responsible for.

- **CSAT Survey Supervisor**

Users with this role are able to:

- View surveys.
- Search, play and download recordings.
- Generate and view reports.

7.1.1 CSAT Survey User Management

The **CSAT Survey Users** section in the Customer Satisfaction Survey web application displays the list of survey users and their account information. Using this section, it is possible to add, edit or delete users from the list.

Follow the steps below to manage the survey users:

- 1) Open the Customer Satisfaction Survey web application and navigate to the **Survey Users** tab.
- 2) To add a new survey user:
 - a) Click **+ Add User** to open a new window for adding the user information.
 - b) Configure the following parameters for the new user:
 - Enter a user name to be used for user authentication in the **User Name** field.
 - Enter the password to be used for the user authentication in the **Password** field.
 - Enter the password again in the **Confirm Password** field.
 - Enter the first name of the user in the **First Name** field.
 - Enter the last name of the user in the **Last Name** field.
 - Choose the role you want to assign to the new user from the **Role** list. It is possible to choose between the following roles: Survey Supervisor, Survey Administrator, Manager and Master.
 - Select the group to which you want to add the new user from the **Survey Group** list.
- 3) To edit an existing survey user:
 - a) Locate the user you want to edit in the survey users list.
 - b) Click  to open a new window for editing the user information.
 - c) Edit the desired parameters.
- 4) To remove a user from the survey users list:
 - a) Locate the user you want to delete from the survey users list.
 - b) Click  to delete the user.

After deletion, the user is no longer displayed in the list of survey users.

Figure 14: Working with survey users in the Customer Satisfaction Survey app

7.1.2 CSAT Survey Group Management

The **CSAT Survey Groups** section in the Customer Satisfaction Survey web application displays the list of survey groups and information about the group (Name, Description, Status). Using this section, it is possible to add, edit or delete survey groups.

Follow the steps below to manage the survey groups:

- 1) Open the Customer Satisfaction Survey web application and navigate to the **Survey Groups** tab.
- 2) To add a new survey user:
 - a) Click **+ Add Group** to open a new window for adding the group information.
 - b) Configure the following parameters for the new group:
 - Enter a name to identify the group in the **Group Name** field.
 - Enter details about the group in the **Description** field.
 - Click the **Status** check box to enable or disable the group.
- 3) To edit an existing survey group:
 - a) Locate the group you want to edit in the survey groups list.
 - b) Click  to open a new window for editing the group information.
 - c) Edit the desired parameters.

Figure 15: Working with survey groups in the Customer Satisfaction Survey app

7.1.3 CSAT Survey Properties Files Management

Properties files are used for language localization. It is necessary to upload such file for each language you wish to use.

In case of the ASR function, CSAT Survey uses the properties files to associate a recognized word (spoken by the caller) with a system value to allow further system processing.

In case of the TTS function, the properties files are used by the system to return a vocal message to the caller in the configured language.

The **ASR/TTS properties files** section in the Customer Satisfaction Survey web application displays the list of properties files uploaded to the app. Using this section, it is possible to upload a new property file and download or delete an existing property file.

Follow the steps below to manage the properties files:

- 1) Open the Customer Satisfaction Survey web application and navigate to the **Properties Files (ASR)**, which is also used for **TTS** purposes.
- 2) To upload a new properties file to the app:
 - Click **Browse** and select the files from your local storage.
- 3) To download an existing properties file:
 - a) Locate the properties file you want to download in the **Installed Files** list.
 - b) Click to download the desired file.
- 4) To remove an existing properties file:
 - a) Locate the properties file you want to remove in the **Installed Files** list.
 - b) Click to remove the desired file.
 - c) Confirm the deletion action in the confirmation dialog.

Figure 16: Working with properties file in the Customer Satisfaction Survey app

The properties files for English and Portuguese are installed by default on the system. For any additional languages to be used, the corresponding properties files must be created and uploaded to the app. The existing properties files can be downloaded from the app and used as an example for creating new ones. It is mandatory that all fields in a properties file are filled in.

The figure below displays an example of a properties file for English:

```

1 csat.language=English
2 csat.locale=en-US See supported locales table below
3 csat.yesno.yes=yes
4 csat.yesno.no=no
5 csat.digit.zero=zero
6 csat.digit.one=one

54 csat.words.number=number
    
```

Figure 17: Properties file for English

The file contains the key element displayed on the left side of the equal sign and its value in the language of the properties file, displayed on the right side of the equal sign. When creating a new properties file using an existing one downloaded from the app, it is necessary to change only the value fields.

The supported locale values are displayed in the following table:

| Locale | Language-Country |
|--------|-----------------------|
| en-US | English-United States |
| pt-BR | Portuguese-Brazil |
| de-DE | Deutsch-Deutschland |
| en-GB | English-Great Britain |
| es-ES | Spanish-Spain |
| fr-FR | French-France |
| it-IT | Italian-Italy |
| ko-KR | Korean-Korea |
| nl-NL | Dutch-Netherlands |
| pl-PL | Polish-Poland |
| ro-RO | Romanian-Romania |
| ru-RU | Russian-Russia |
| zh-CN | Chinese-China |

Table 2: Supported locale values

The file name for a new language properties file must have the following format:

`messages_<language>_<COUNTRY>.properties`

Example: `messages_de_DE.properties`

7.1.4 CSAT Survey System Parameters Management

The **System parameters** section in the Customer Satisfaction Survey web application allows to enable or disable the **Store Individual Agent Statistics** option.

The default value of the **Store Individual Agent Statistics** option is **Yes**. If this option is set to **No**, no agent data is stored and the statistics are stored anonymously.

NOTICE: Depending on legal requirements, for certain countries (e.g. countries of the European Union) this flag must be set to **No**.

NOTICE: If this flag is set to **No** after agent data has already been stored under the flag **Yes**, then this data will not be deleted.

Figure 18: Working with system parameters in the Customer Satisfaction Survey app

7.2 CSAT Survey Administration

Using the CSAT Survey Management page it is possible to manage and configure surveys, recorded audio files and reports.

Logging in to the CSAT Survey Management page is possible only for users with the **CSAT Survey Administrator** or **CSAT Survey Supervisor** roles. The users with the **CSAT Survey Administrator** role have access all configurations, while the users with the **CSAT Survey Supervisor** role have only read-only rights.

When a user logs in to the CSAT Survey Management page, the following conditions are verified:

- If the Nuance voice packages are consistent with the configured surveys.
- If the extensions associated with surveys are configured in CMS.

If the conditions are not fulfilled, a warning message is displayed to the user indicating the cause of the problem.

7.2.1 CSAT Survey Configuration

The **CSAT Survey Configuration** area in the Customer Satisfaction Survey web application, displays a list with the following data about surveys:

- **Name:** unique name to identify the survey.
- **Production:** indication that the survey is in **Production** state, when green or not when red.
- **Archive:** indication that the survey is archived, when green or not when red.
- **Number of questions:** the number of questions in the survey.

Figure 19: Using the Surveys tab

Using the **CSAT Survey Configuration** area, it is possible to add a new survey, view details of existing surveys, add questions to existing surveys and view question diagrams.

Follow the steps below to manage surveys:

- 1) Open the Customer Satisfaction Survey web application and navigate to the **Surveys** area.

2) To add a new survey:

a) Click **+ Add Survey** to open a new window for creating a new CSAT survey.

b) Configure the following parameters for the survey:

- Enter a name to uniquely identify the survey in the **Survey Name** field.
- Enter a welcome message to be played at the beginning of the survey in the **Survey Welcome Message** field.

This step is optional.

- Enter an ending message to be played at the end of the survey in the **Survey End Message** field.

This step is optional.

- Add the survey group for which the survey will be used in the **Survey Group** area.
- Set the value for **Max Recording Time (sec)** for the open questions.
- Enter the **Transfer Number** for accessing the survey in the **DNIS** area.

This is a combo box with the configured extensions that are not assigned to other surveys yet.

- Enter the input type in which the caller must provide answers to the survey questions in the **Input type** field.

The options available are: DTMF (key press), Speech or both.

- Select the survey language for the TTS and ASR packages, in the **Language** area.

3) To view details of existing surveys:

a) Locate and select the survey for which you want to display details in the list of existing surveys.

b) The details of the selected survey will be displayed on the right side of the screen, in the **Survey Details** panel.

This panel allows for:

- Viewing survey details
- Deleting the selected survey, by clicking **Delete**
- Editing the selected survey, by clicking **Edit**
- Changing the state of the selected survey to **Production** or **Archive**

NOTICE:

It is not possible to edit a survey in the **Production** state. Surveys that are in this state can only be archived.

When a survey is archived, the associated **Transfer Number** can be reused by another survey.

It is only possible to delete a draft survey, that is not in **Production** state yet.

- 4) To add new questions to an existing survey or to view to currently added questions:
- a) Locate and select the survey to which you want to add questions, in the list of existing surveys. The available options are displayed under the list of surveys.

NOTICE:

The **+ Add Questions** option is displayed only if the survey selected is not in **Production** state.

For surveys in the **Production** state, only the **View Questions** option is displayed, as it is not possible to edit any details of the surveys that are in this state.

- b) Click **+ Add Questions** to add new questions to a survey that is not in the **Production** state.

A new window opens. Configure the following parameters to add new questions:

- Add a title for the new question in the **Question title** field.
- Select the question type in the **Question type** area.

The possible type are:

Yes / No: it can be mapped when pressing the "0" / "1" keys.

Open Questions: a .wav file with the caller's answer will be recorded.

Scale: the possible values are defined in a scale from 0 to 10.

Net Promoter Score: by definition, the scale must be from 0 to 10.

- Add the content of the question in the **Question content** field.

Finally, save the question to the selected survey, by clicking **Save**.

If you wish to cancel the question addition, click **Cancel**.

NOTICE:

For Open Question, it is not possible for the caller to listen back and confirm the recorded message.

The caller input for the survey questions can be provided via DTMF or Speech, depending on the survey configuration. This excepts the Open Question.

In case of DTMF detection, it is possible to use values in the range of 0 to 10 to rate a question. If the caller presses "1", it is possible that he/she stops there and rates a question with 1 or, after pressing "1", he/she presses "0" as well to rate the question with 10. Therefore, if the caller

wishes to rate a question with 1, he/she must wait 5 seconds for the rating operation to be completed.

Figure 20: Adding a new question to an existing survey

- c) To view questions of existing surveys that are in the **Production** state, use the **Question Diagram** area.

This area can be expanded or collapsed, by clicking the **+** or **-** buttons, displayed on the upper right side of the **Question Diagram** panel.

This area also displays the flow of questions the selected survey. All branches in the question diagrams must terminate with **End**.

Figure 21: Viewing Question Diagrams

7.2.2 CSAT Survey using Custom Audio Files

From OpenScope Media Service V12 onwards it is possible to upload wave files to be used in the CSAT Survey questions without the need of using TTS licenses.

The instructions below show how to configure the CSAT Surveys questions to use wave files.

Configuring the Custom Audio Files

In the Customer Satisfaction Survey UI, access the Custom Audio Files section.

In this section all available Custom Audio Files will be listed.

NOTICE:

The Custom Audio Files section is available only to Survey Master and Survey Administrator users.

For Survey Master users, all audio files on the OSCMS system will be listed.

For Survey Administrator users, only audio files configured to the Survey Groups to which they belong will be listed.

In the Custom Audio Files section, a user is able to edit, delete and playback the available Custom Audio Files and add new Custom Audio Files.

IMPORTANT: Custom audio files with state IN USE cannot be deleted.

When changing the Survey Groups to which a Custom audio file is available, groups associated with surveys using this audio file cannot be removed.

Configuring the Audio System Messages

In the Customer Satisfaction Survey UI, access the System Parameters section. In this section it is possible to choose the type of playback of System Messages (Text to speech or Audio Messages).

Access the Audio System Messages section.

In this section, a user is able to delete and playback the available Audio System Messages and upload new Audio System Messages.

NOTICE:

The System Parameters and Audio System Messages sections are available only to Survey Master users.

Configuring Surveys to use Custom Audio Files

In the Customer Satisfaction Survey UI, access the Surveys section.

NOTICE:

The Surveys section with permission to configure surveys is available only to Survey Administrator users.

When adding or editing a Survey, it is possible to choose the playback type of the Welcome and End messages. Select Custom Audio File to use audio files to reproduce these messages and not need available TTS licenses.

CSAT Survey Management and Administration

By clicking the Browse button, a modal window opens listing the Custom Audio Files available for the selected Survey Group. User is able to play each file before selecting one.

By changing the selected Survey Group of a Survey, a modal window opens warning the user that any configured Questions will be deleted. Any selected Welcome and End audio messages also will be cleared.

This ensures that a Custom Audio File that does not belong to the selected Survey Group is not configured in the Survey.

IMPORTANT:

Available Custom audio files are associated with Survey Groups. By changing a Survey Group, we need to somehow ensure that the selected Custom audio files are available to the new selected Survey Group.

NOTICE:

When configuring a Survey, set the Input Type to DTMF to avoid needing available ASR licenses.

When adding or editing Questions, it is possible to choose the playback type of the Question. Select Custom Audio File to use audio files and not need available TTS licenses.

By clicking the Browse button, as well as for the Welcome and End messages, a modal window opens listing the Custom Audio Files available for the selected Survey Group. User is able to play each file before selecting one.

7.2.3 CSAT Survey Recording Files

The **Recording Files** section in the Customer Satisfaction Survey web application allows for searching and playing the audio files recorded for CSAT Survey open questions.

Follow the steps below to use the **Recording Files** tab:

- 1) Open the Customer Satisfaction Survey web application and navigate to the **Recording Files** tab.

- 2) To search for recording files:
 - a) Fill in the search criteria with the following information:
 - **Survey:** the unique name that identifies the survey
 - **ANI:** unique identifier for the caller who participated in the survey
 - **Start Date:** the search interval that indicates the start date and time
 - **End Date:** the search interval that indicates the end date and time
 - **Search recordings:** the recordings search procedure
 - **Clean:** option to clear the search criteria and search results
 - b) Click **Search Recordings** to start searching for recording files using the search criteria defined.
 - c) If any recording files correspond with the search criteria defined, the search results are displayed in the **Search Results** area.

The **Search Results** area displays the following information:

- **File Name:** unique identifier for the recorded audio file
- **Survey Name:** unique identifier for the survey
- **Group Name:** unique identifier for the survey group
- **Start Date:** date and time when the audio file was recorded
- **ANI:** the caller number who participated in the survey

Figure 22: Using the Recording Files tab

7.2.4 CSAT Survey Reports

The **Survey Reports** section in the Customer Satisfaction Survey web application allows for accessing survey results and for creating, viewing and modifying survey reports.

Follow the steps below to use the **Survey Reports** tab:

- 1) Open the Customer Satisfaction Survey web application and navigate to the **Survey Reports** tab.

- 2) To generate a report, configure the parameters in the **Report Options** area.
 - a) Select the report type you want to generate from the **Report Type** drop-down menu.

The possible options are displayed in the following figure.

Figure 23: Options available for the Report Type

Survey Summary: this report shows the result for each question of a survey on a timely basis. The survey can be generated for one specific agent or for all agents.

Agent Compliance: this report shows the deviation in the results of an agent, compared to the average result of the group of agents. The **Average Surveys Per Agent** value comes from the total **Count** divided by **Total Agents**. The **Deviation** value comes from the difference between a specific agent and the average.

NPS (Net Promoter Score): this report shows the general result of the survey. Net Promoter Score is calculated by subtracting the percentage of callers who responded 0 - 6 (the Detractors) from the percentage of those

who responded 9 - 10 (the Promoters). The result is a raw value and not a percentage.

Survey per Question: this report shows the detailed result per survey question. The report can be generated for one specific agent or for all agents.

The example below shows a report on a daily basis for all agents.

Figure 24: Example of a daily basis report for all agents

- b) Select the survey to be used in the report from the **Select Survey** drop-down menu.
- c) Set the time interval for generating the report in the **Start Date** and **End Date** areas.
- d) Select the agent/agents for whom you want to generate a report from the **Select an Agent ID** drop-down menu.

If the **Store individual Agent Statistics** option is set to **No** (see chapter [CSAT Survey System Parameters Management](#) on page 29), then the only available option is **All Agents**. In this case, the reports do not show individual statistics.

To generate reports for a specific agent, the **Store individual Agent Statistics** option needs to be set to **Yes**.

- e) Define how to group statistics in the report, by enabling the **Daily** or **Monthly** options.
- 3) Click **Generate Report** to see the report according to the parameters configured in the previous step.

8 CSAT Report Examples

This chapter provides examples of CSAT reports that can be generated using the Customer Satisfaction Survey web application.

8.1 Survey Summary Report Examples

This chapter presents several types of **Survey Summary Reports**.

Example 1

This example presents a **Survey Summary Report** where the results are displayed on a **Daily** basis for **All Agents**.

The screenshot shows a form titled "Report Options" with the following fields and controls:

- Report Type:** A dropdown menu set to "Survey Summary Report".
- Generate Report:** A yellow button with a magnifying glass icon and the text "Generate Report".
- Select Survey *:** A dropdown menu set to "Survey 1".
- Start Date *:** A date field set to "9/18/2024" with a calendar icon.
- End Date *:** A date field set to "10/18/2024" with a calendar icon.
- Select an Agent ID:** A dropdown menu set to "All Agents".
- Frequency:** Two radio buttons, "Daily" (which is selected) and "Monthly".

Figure 25: Example 1: Survey Summary Report with results displayed on a daily basis, for all agents

With this configuration, the report results are the following:

8.4 Survey Per Question Report Examples

This chapter presents two examples of **Survey Per Question Reports**.

Example 1

This example presents a **Survey Per Question Report** where the results are displayed for **All Agents**.

The screenshot shows a form titled "Report Options" with a blue header. The form contains several input fields: "Report Type" is set to "Survey Per Question"; "Select Survey *" is set to "Survey 5"; "Start Date *" is set to "9/2/2001" and "End Date *" is set to "10/18/2024"; and "Select an Agent ID" is set to "All Agents". A yellow "Generate Report" button is located in the top right corner of the form.

Figure 43: Example 1: Survey Per Question Report with results displayed for all agents

With this configuration, the report results are the following:
